When listening to a message, if you press (pause), the display shows

When recording a memo from the base station, recording a conversation or when a message is being left, the display shows a scrolling

When the answer machine is full, the number of messages blinks fast.

Onis 380 Vox Base station

The base station can be used to make calls just like a handset.

Do Not Disturb indicator (red)

ON : The mode is activated
OFF : The mode is deactivated

Power indicator (green)
ON : System correctly connected to the mains
OFF : System not powered
Blinking : The line is busy
Blinking fast : Call transfer in progress

– Decrease the volume of the base loudspeaker and deactivate call screening

+ Increase the volume of the base loudspeaker and activate call screening

To page all handsets when in idle mode or make a direct call transfer when on line

To record a memo when in idle mode. To record a conversation when on line, press again to stop recording

R To use the operator services

To redial the last number called from the base (see page 8).

To take the line, make the call and answer a call

To mute the microphone when on line. Press again to unmute.

Answer machine control keys (see page 8 for more information)

1 One press to go back to beginning of message. Two quick presses to go back to previous message

2 Press to listen to the messages or pause when listening to messages

3 A long press to fast forward a message. Press to go to next message

6 Press to erase the current message. A long press to erase all the already read messages

7 To activate the answer machine. When the answer machine is on, press to listen to the current outgoing message

8 To stop the listening of the current message

9 To deactivate the answer machine

Press to active or deactivate the "Do Not Disturb" mode

Table of contents

Philips has marked the battery and packaging with standard symbols designed to promote the recycling and appropriate disposal of your eventual waste.

A financial contribution has been paid to the associated national recovery & recycling system.

The labelled packaging material is recyclable.

DECT™ is a trade mark of ETSI registered to the benefit of the implementers of the DECT technology.

Installing the base station

To properly install the base station, plug the line cord and the power cable into the base station. Plug the cord and the cable into the wall socket. The green indicator on the base station indicates that the phone is properly installed.

⚠️ **Warning !** The electrical network is classified as dangerous according to criteria in the standard EN 60-950. The only way to power down this product is to unplug the power supply from the electrical outlet. Ensure the electrical outlet is located close to the apparatus and is always easily accessible.
Warning :Always use the cables provided with the product.
Do not insert anything in this opening

Installing and replacing the batteries
To insert the batteries, open the battery cover, place the batteries as indicated and put the battery cover back. When the handset is placed on the base, the 3 battery bars scroll (if charge is needed). Allow the handset to charge for 24 hours to reach full charge. On first use it may be necessary to wait for a few minutes before seeing symbols on the display.
In case you need to change the batteries, the following type is mandatory R03/AAA NiMh 600/650 mAh.
Warning : It is advisable to plug the base station into the mains when charging. Always use rechargeable batteries.

Batteries should not be disposed of with general household waste.

Battery life and range

The battery life is about 250 hours in stand by time (when the handset is in idle mode & ready to receive a call) and around 16 hours in communication. A low battery alert will inform you that the handset has to be charged, if this is during a call, the call will end shortly after the alert.
Optimal battery life is reached after 3 cycles of full charge/discharge.

Under ideal conditions the range is a maximum of 50 meters indoors and 350 meters outdoors. When reaching the range limit, the conversation will become crackly, move closer to the base station otherwise the call will be cut off. To reach optimal range place the base station away from electrical appliances.

Basic use of the base station

Making a call from the base

Connect the line (call icon) and dial from the base station keypad

Answering/ending a call on the base

When the phone rings, press (call icon) to answer the call. Press again (call icon) to end the call.

Redial (Redial last number called from the base)

Press (call icon) and then (redial icon)

To activate/deactivate the "Do Not Disturb" mode from the base

Press (#/DND icon) to activate/deactivate this mode with your own settings.

In-call features on the base station

During an external call, you can access from the base to additional features.

To mute the base microphone when on line

1- Press (mute icon)

The caller can no longer hear you, but you can hear him.

To resume the conversation press again (mute icon).

Call transfer from the base
During an external call, you can transfer the call to handset from the base station

1- press (transfer icon)

2- The caller hears music (if music on hold is activated)
3- All the handsets ring
4- Answer the call on any handset.
The caller is directly transfered to the handset

If no handset answers, after a while the base will ring again, resume the call on the base, by pressing (transfer icon) again.

To record a memo on the base in idle mode

To start recording press (MEMO), speak close to the base and press again (MEMO)

To record a conversation on the base when on line

To start recording press (MEMO), press again (MEMO) to stop recording.

The call is recorded on the answer machine for a maximum of 6 mins. It automatically stops if the answer machine gets full.

To increase/decrease the base loudspeaker volume during a call

Press (+)/(−) on the base station as many times as necessary.

Call waiting

If you are subscribed to this service, a beep informs you of a second incoming call.

To answer the second call press (R) then (2) (according to your network, the code may be different). Please contact your operator for more details.

Answer machine features

To switch the Telephone Answer Machine (TAM) ON/OFF from the base

From the base station press (7) to activate the answer machine.
Once activated the display on the base is lit.
With that key you can activate the answer machine even when the phone is ringing.
When the answer machine is ON, press to listen to the current outgoing message.

To deactivate it press (9). The display switches off.

To listen to your messages from the base

Press (2) to retrieve the messages or to pause while listening

Press (1) to go back to the beginning of the message

Keep pressing (3) to fast forward a message.
The message is played fast but is very audible.
Press to go to next message.

Press (8) to stop listening to the message.

To delete messages from the base

Press (6)
A short press on the key deletes the message while played.
A long press deletes all the messages (except unread ones).
The number of messages blinks fast on the base display when the answer machine is full.

Call screening "call by call" on the base
Call screening is activated by default, you can permanently deactivate it (see page 24).

Press (+)/(−) to increase/decrease the base loudspeaker volume or even activate/mute the loudspeaker on a call by call basis.

The screen in idle mode

In idle mode, the Onis 380 Vox display shows different information :

Mon 4 Nov 02 11:31
Philips
+◊ Menu

In normal idle mode the display shows the date & time, the name of the handset and the instruction for using the menu.

Options
Intercom
□◉□

Intercom (if there are several Onis 380 Vox handsets)
During a call, you can put a call on hold, transfer an external call or share the conversation on conference call : 1 external call + 2 internal callers (See page 27, 28)

To record a conversation

1- While on line Press ✦❲

Options
Record
□□◉

2- Scroll ❲❳ to **Record** and validate ✦❲
The call is recorded on the answer machine for a maximum of 6 minutes. To continue recording resume from step 1 above.

To listen to the conversation go to the Call log menu or the messages list (▦).
Warning : Record a conversation may be illegal. We advise you to inform the person your are calling.

During an internal call, other in-call features are available, such as **Switch** and **End intercom**.

To switch the loudspeaker ON/OFF
Press ◔ to activate/deactivate the louspeaker on the handset.
A long press activates the base loudspeaker.

To increase/decrease the handset earpiece or loudspeaker volume during a call
Scroll the pilot key up or down ❲❳ on the side of the handset.
Or use ⊕ ⊖ on the base station.

Call screening "call by call" on the handset.
While the caller is leaving a message, press ✦❲ to listen and press ✦❲ again to stop listening.
Adjust the volume with ❲❳.

CLI/Call waiting

If you are subscribed to this service, a beep in the earpiece informs you of a second incoming call. The name or the number of the second caller may be displayed on the screen if you are also subscribed to the Caller Line Identification service.

To answer the second call press ◔ then ② (according to your network, the code may be different). Please contact your operator for more details.

Editing systems

Using capital letters

By default, the first letter of a sentence is in upper case. Use ⊛ to change the case mode : all characters in upper case (AB) or all letters in lower case (ab).

Punctuation and mathematical symbols are available through ⊛ while other special characters are available through ⊛. ⊞ Scroll to move the cursor left or right. Press ⊙ to delete a character ; a long press deletes the whole text.

Onis 380 Vox uses two editing systems : Multi-tap and Eatoni. Make a long press on ⊛ to switch between both systems. Below both systems are compared to write "Peter".

The standard multi-tap system allows you to enter the text character by character, pressing the corresponding key as many times as necessary to reach the desired character.

To write "Peter" with Multi-tap system"

Press (7 PQRS) once : P

Press (3 DEF) twice : Pe

Press (8 TUV) once : Pet

Press (3 DEF) twice : Pete

Press (7 PQRS) three times : Peter

Keypad Keys	Multi-tap Sequence
1	[space] 1 @ _ # = < > ( ) & € £ $ ¥
2	a b c 2 à ä ç å æ
3	d e f 3 è é Δ φ
4	g h i 4 ì Γ
5	j k l 5 Λ
6	m n o 6 ñ ò ö
7	p q r s 7 ß Π θ Σ
8	t u v 8 ù ü
9	w x y z 9 φ Ω Ξ Ψ
0	. 0 , / : ; " ' ! ¡ ? ¿ * + - %

The Eatoni system is a new predictive editing system designed to help you write a text.
 A small E in the header helps you know the mode you are using.
Eatoni is a word editor that chooses the most probable character.
The operation of the Eatoni system is the following :
Press the key that displays the character you want to edit. The character that is the most likely to be correct is displayed on the screen. If it does not match the expected character, press ⊛ to display the next most probable character available on the key.

To write "Peter" with Eatoni

Enter name : |Ab

Press ⊛ to activate Eatoni

Enter name : E|Ab

Press (7 PQRS)

Navigation reminder :

◆║ ‖║ (Go to)   ◆║ (Validate)

‖║ (Scroll to)   ‖║ ◆║ (Select)

SMS stands for Short Message Service. SMS are short text messages sent/received via the network.
To benefit from this service you must subscribe to the Caller Display service (CLI) from your network provider.
SMS can be exchanged with a phone (mobile or compatble fixed lines), a fax or an E-mail (country dependent), if the receiver has also subscribed to the CLI & SMS services.

⚠ **The Onis 380 Vox factory settings correspond to the main national operator. If you wish to send or receive SMS through another operator you must set the corresponding numbers (see page 16).**

You have the possibility of opening 10 SMS boxes (country dependent) one shared & 9 private to increase confidentiality.
A password can protect your SMS box, but it is not compulsory.
To send an SMS to the receiver's own SMS box, you must know his destination box (if needed).
The delivery report may be charged. It is deactivated by default, activate it when you send an SMS.

Sending new SMS

To send an SMS to a phone

1- Go to **SMS**, validate
2- Select **Send new SMS**, validate
3- Choose your SMS box & enter the password (if you have created several SMS boxes), validate
4- Select **Send SMS to a Phone**, validate
5- Dial the number (you can use the call log or the phonebook)
6- Enter the destination box (if prompted to), validate
7- Input the text (See page 12)
8- Scroll to **Delivery report** to activate it if necessary, validate
9- Select **Send Now**, validate

NB : The Delivery report option is country dependent

The outgoing SMS can be up to a maximum of 160 characters long (E-mail address included).
The special character **€** counts for 2.
Onis 380 Vox can store up to 100 SMS (depending on the length of the SMS) for the 10 SMS boxes.

To send an SMS to a fax number (country dependent)

You can set the ringer for :
- The external standard ringer for callers whose number is not stored in the phonebook or with no VIP settings (see page 30).
- The internal ringer for intercom (if there are at least 2 handsets).

To set the 3 VIP ringer types (Friends ☺ , Family 👪 & Work 💼) see page 36.

Sounds
Ringer type
◉▢▢▢▢

To set the ringer on the handset
1- Go to **Handset**, validate
2- Select **Sounds**, validate
3- Select **Ringer type**, validate
4- Choose **Exernal Standard ringer/Internal ringer**, validate
5- Select the ringer in the list and validate

Sounds
Ringer volume
▢◉▢▢▢

To set the volume level
There are 5 levels plus the vibration call alert.
1- Go to **Handset**, validate
2- Select **Sounds**, validate
3- Scroll to **Ringer volume**, validate (the current level is heard)
4- Choose the appropriate volume and validate
Note: You can also activate the vibration call alert. In this case, the ringer will be in silence mode

Sounds
Earpiece tone
▢▢◉▢▢

To set the earpiece tone
1- Go to **Handset**, validate
2- Select **Sounds**, validate
3- Scroll to **Earpiece tone**, validate
4- Choose **Standard, Treble** or **Bass** and validate

Sounds
Key & feedback tones
▢▢▢◉▢

To set the key & feedback tones
Tones are audio feedbacks heard when pressing the keys, validating a setting.
1- Go to **Handset**, validate
2- Select **Sounds**, validate
3- Scroll to **Key & feedback tones,** validate
4- Select **ON/OFF**, validate

To set the notification beep

The notification beeps are audio indicators heard when there is a new SMS or a message on the voice mailbox.

1- Go to **Handset**, validate

2- Select **Sounds**, validate

3- Scroll to **Notification beep,** validate

4- Select **ON/OFF**, validate

The babysit mode

This feature allows you to monitor the baby's room. Place the handset in the room to be monitored and you will hear the noise coming from the room on the additional handset.

To activate/deactivate the babysit mode

1- Go to **Handset**, validate

2- Scroll to **Babysit mode**, validate

3- Select **ON/OFF**, validate

An Intercom is necessary to monitor the room (see page 27).

Note : You can still answer a call or make a call with the handset.

Warning : If, when a handset is in babysit mode ON, if another handset transfers a call, then the former automatically answers the internal call.

Registration

Up to 8 handsets can be registered to the base station. 1 handset can be associated to 4 base stations.

Warning : If you wish to associate non Philips handsets to the Onis 380 Vox base station, make sure that this handset is GAP compliant otherwise it will not operate properly (See page 41).

To register an additional handset

1- Unplug and plug back in the mains lead to put the base into registration mode

2- With the additional handset, press ✦❙ to start the registration

3- Enter the 4-digit RC code written on the sticker placed under the base station.

4- Validate ✦❙

If successful, the additional handset will be named & numbered (**Philips2**). The attached digit is linked to the registration order.

To un-register the handset

1- Go to **Handset**, validate

2- Scroll to **Registration**, validate

3- Select **Un-register handset**, validate

4- Choose in the list the handset to un-register, validate

5- Enter the RC code (4-digit code) and validate

Note : If you can, un-register a defective handset before returning the product to the repair centre.

Using the Onis 380 Vox handset with several base stations (Philips or non-Philips)

Each Onis 380 Vox handset can be used with up to 4 base stations. To use a handset with another base station, the handset must first be registered to that base station (see page 19).

When you want to call through that base station

1- Go to **Handset**, validate

2- Scroll to **Registration**, validate

3- Scroll to **Base selection**. validate

Choose the base from the list and validate.

Warning : The handset will automatically operate with the last base station to which it was registered. If the handset is out of range, it will automatically search for another base station from the list.

Renaming the handset

To rename a handset

1- Go to **Handset**, validate

2- Scroll to **Rename handset**, validate

3- Change the name and validate

Changing the language

To change the language

1- Go to **Handset**, validate

2- Scroll to **Language**, validate

3- Select the language and validate

Warning : Changing the language will not change the voice prompts of the answer machine.

Setting the date and time

This feature sets the system to the right date & time.

It is also used to date the messages and all events in the call log.

To set the date

1- Go to **Handset**, validate

2- Scroll to **Date & time**, validate

3- Choose **Set date**, validate

4- Enter the current date and validate

To set the time
1- Go to **Handset**, validate
2- Scroll to **Date & time**, validate
3- Choose **Set time**, validate
4-Enter the current time and validate
Warning : If your phone is connected to an ISDN line through an adapter the date & time may change after each call. Please check the date & time settings in the ISDN system. Please contact your network provider.

Setting the display contrast

To set the contrast
1- Go to **Handset**, validate
2- Scroll to **Display contrast**, validate
3- Select the appropriate level and validate

Setting the backlight

Both display and keypad are backlit.

To set the backlight
1- Go to **Handset**, validate
2- Scroll to **Backlight,** validate
3- Select **10s / 20s / OFF** and validate
Note : Deactivating the backlight saves battery life.

◗□□□

Saved messages

Play

◗□□□□□□

1- Go to **Answer machine**, validate

2- Select **Saved messages**, validate

3- Select the message to listen, validate

4- Choose **Play** in the options and validate

Note : you can listen to message(s) via the Call log. A long press on 🖲 accesses the messages list, the entry is marked ◆📧 (see page 32).

To listen to new /saved message(s) via the base station Press (2ᴬᴮᶜ) .

Deleting messages

To delete messages

Once you have listened to the message you can delete it.

1- Go to **Answer machine**, validate

2- Select **Saved messages**, validate

3- Select the message to delete, validate

4- Scroll to **Delete**, validate

.

Warning : If *Answerphone full* message appears on the handset display, there is no more space for messages. Delete messages so that new ones can be left.

Selecting the answer mode and the outgoing message type

You can select among 2 answer modes : Answer only (when no messages can be left), and Answer & Record (when messages can be left). For each mode, 2 outgoing message types are available : Predefined or Personnal message. By default the answer machine is set to Predefined Answer & Record mode.

To select the answer mode

1- Go to **Answer machine**, validate

2- Scroll to **Outgoing messages**, validate

3- Select **Answ. machine mode**, validate

4- Choose the appropriate mode (among the 4 options above) and validate

Note : A predefined message cannot be deleted.

Recording your personal outgoing message (OGM)

You can record 5 different personal OGM :

- a specific personal OGM for Answer & Record mode for each of the VIP phonebooks (Familly, Friends, Work),

- the standard OGM for Answer & Record mode for non VIP callers, and

- the standard OGM for Answer only mode for all callers.

It is possible to record specific messages for VIP groups only if you subscribe to the Caller Display service (CLI) and if you have set the VIP groups in the phonebook (See page 30).

To record an outgoing message

1- Go to **Answer machine**, validate

2- Scroll to **Outgoing messages**, validate

3 -Scroll to **Record Outgg mssg**, validate

4- Select a group (standard or 1 of the 3 VIP groups), validate

5- Select **Record new**, validate

6- Press ➡◖ to start recording

To stop recording press ➡◖ again

The message is automatically played back. You can delete and/or record it again. The personal message can be up to 3 mins long.

Note : Select a standard outgoing message (OGM) if you have no Caller Display (CLI) subscription.

Setting the number of rings before answer

You can set the answer machine to start playing the outgoing message after a given number of rings (3,5,7 and Toll saver).

The toll saver option (activated by default) is useful when using the remote access. The answer machine will start playing the outgoing message after 3 rings if there are new messages. If there is no new message the outgoing message will be played after 5 rings.

Hang up after the 4th ring if you want to check if you have any messages at no cost.

To set the number of rings before answer

1- Go to **Answer machine**, validate

2- Scroll to **TAM Settings**, validate

3- Scroll to **Number of rings before answering**, validate

4- Select the appropriate setting and validate

Setting the voice prompts

Voice prompts are vocal indications played when consulting the answer machine. By default they are activated. You can set them to indicate the number & date of the messages or the number of messages only. You can also deactivate them.

To set the voice prompts

1- Go to **Answer machine**, validate

2- Scroll to **TAM Settings**, validate

3- Scroll to **Voice prompts**, validate

4- Select **Messages & date/Messages/OFF** and validate

Setting the call screening

This feature allows you to set the volume of the base station loudspeaker so that you can choose whether or not to hear the callers leaving a message.

You can set permanent call screening on the base station

To activate/deactivate the call screening

1- Go to **Answer machine**, validate

2- Scroll to **TAM Settings**, validate

3- Scroll to **Call screening**, validate

4- Select **ON/OFF** and validate

Call screening "call by call" on the base is possible even if the call screening is deactivated it can be switched on at any time when somebody leaves you a messages. Press (+) on the base each time necessary.

To increase the volume of the base loudspeaker when on line, press $\oplus$ several times.

To decrease and/or deactivate the base loudspeaker when on line, press $\ominus$ several times.

Setting the recording quality

There are 2 recording qualities : standard & high.
In standard quality the total capacity is up to 60 mins. In high quality the total capacity is up to 30 mins.

TAM Settings
Recording quality

"Do Not Disturb" mode

This feature allows you to screen the calls after a certain time in the evening or when you do not wish to be disturbed. Enter the time and select the VIP group allowed to call you.
If the caller does not belong to an allowed group, the handset & base station will remain silent, while he will hear ringing. The green indicator informs you of an incoming call. The answer machine (if activated) or the operator voice mailbox will answer the call.
Suscription to the Caller Display (CLI) service is needed.
By default the feature is OFF.

To activate/deactivate the Do Not Disturb mode from the handset

A long press on ⊛ activates/deactivates this mode with your own settings.

To activate/deactivate "Do Not Disturb" mode 🔳

1- Go to **Extra**, validate
2- Scroll to **Do Not Disturb mode**, validate
3- Select **Set day** and select a day, validate
4- Scroll to **Start time** and enter the time, validate
5- Scroll to **Stop time** and enter the time, validate
6- Scroll to **Allowed caller choice**, activate the callers group allowed to call you and validate
Note : You can select up to 4 groups. If no group is selected but the feature is activated, then nobody will be able to reach you.

Setting the base station

Setting the base station sounds

Base

Sounds
Ringer type

To set the ringer type
1- Go to **Base station**, validate
2- Scroll to **Sounds**, validate
3- Select **Ringer type**, validate
4- Choose the ringer in the list and validate

Sounds
Record pers. melody
To record the personal melody
1- Go to **Base station**, validate
2- Scroll to **Sounds**, validate
3- Scroll to **Record pers melody**, validate
4- Scroll to **Record new melody** , validate
5- to start recording
6- Press again to stop recording
7- Activate this ringer in the above menu

Sounds
Ringer volume

To set the ringer volume level
1- Go to **Base station**, validate
2- Scroll to **Sounds**, validate
3- Scroll to **Ringer volume**, validate
4- Select the appropriate level and validate

Sounds
Music on hold

To activate/deactivate the music on hold
The feature allows the caller to hear music when the call is put on hold
when transferring a call.
1- Go to **Base station**, validate
2- Scroll to **Sounds**, validate
3- Select **Music on hold,** validate
4- Select **ON/OFF**, validate
Note : If the feature is deactivated, the caller will hear beeps.

Registration

This feature allows you to register a DECT peripheral without keypad

Base Station
Enable registration
To register a DECT peripheral
1- Go to **Base station**, validate
2- Scroll to **Enable registration**, validate
3- Enter the peripheral code and validate
4- Follow instructions in the peripheral manual (see page 41)

The line settings

It can be useful to change the line settings if your network operator is not the main national operator set by default in the phone, especially for the Caller Display service (CLI).

Line settings
Dial mode

To change the dial mode (country dependent)
1- Go to **Base station**, validate
2- Scroll to **Line settings**, validate
3- Select **Dial mode**, validate
4- Select **Tone/Pulse**, validate

Line settings
Network type
To change the network type
1- Go to **Base station**, validate
2- Scroll to **Line settings**, validate
3- Scroll to **Network type**, validate
4- Select **PSTN/PABX,** validate

Philips has designed this product to work on PSTN line and cannot guarantee the complete application on ISDN network.

Line settings
Recall type

To change the recall type (country dependent)
1- Go to **Base station**, validate
2- Scroll to **Line settings**, validate
3- Scroll to **Recall type**, validate
4- Select **Short flash/Long flash**, validate
Note : This feature is useful when you are using operator services, with the

$\left(\text{C/R}\right)$ key.

To change the operator type (country dependent)

1- Go to **Base station**, validate

2- Scroll to **Line settings**, validate

3- Scroll to **Operator type**, validate

4- Select among the suggested types and validate

Note : Useful if the Caller Display service does not work when you subscribed to that service. The default setting is type 1.

Line settings
Operator type
☐☐☐☐☐

To activate/deactivate the first ring

To prevent the phone from ringing when receiving an SMS, the first ringer is deactivated. You can activate it.

1- Go to **Base station**, validate

2- Scroll to **Line settings**, validate

3- Scroll to **First ring**, validate

4- Select **ON/OFF**, validate

Line settings
First ring
☐☐☐☐☐

Service code settings

When you subscribe to extra services with your operator you may need to set some codes in your phone.

The default codes are the codes used by the main national network operator.

If you subscribed to another operator you may need to change the codes.

Contact your network operator for more information on the services (see page 35).

To change a service code

1- Go to **Base station**, validate

2- Scroll to **Service code settings**, validate

3- Select the appropriate service, validate

4- Select **Change** and enter the new code and validate

Using GAP standard compliance

The GAP standard guarantees that all DECT™GAP handsets and base stations comply with a minimum operating standard irrespective of their make. Your Onis 380 Vox handset and base station are GAP compliant, which means the minimum guaranteed functions are : register a handset, take the line, receive a call and dial. The advanced features may not be available if you decide to use a handset other than the Onis 380 Vox with your base station.

To register and use your Onis 380 Vox handset with a GAP standard base station of a different make, first follow the procedure described in the manufacturer's instructions, then follow the procedure page 19.

To register a handset from another make to the Onis 380 base station, put the base station into registration mode (page 39), then follow the procedure in the manufacturer's instructions.

Register a DECT™peripheral without keypad

Some DECT™peripherals, such as repeaters, do not have a keypad. A special menu-operated procedure is used to register such peripherals with the base station without the need to disconnect the base station. See page 19 or 39 to put the base station in registration mode, enter the code that comes with the peripheral and validate. Use the peripheral instructions to register it to the base station.

Conformity, Environment and Safety

Safety information : This equipment is not designed to make emergency calls when the power fails. An alternative has to be made available to allow emergency calls.

Conformity : Hereby, Philips declare that the products Onis 380 (TU5371, TU5372 & TU5370) are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. Should you need a copy of the original certificate, please contact the Philips customer care center. This product can only be connected to the analog telephone network in the area which is indicated on the label placed under the base station.

Power requirements : This product requires an electrical supply of 220-240 volts, alternating monophased power, excluding IT installations defined in standard EN 60-950.

Warning ! The electrical network is classified as dangerous according to criteria in the standard EN 60-950. The only way to power down this product is to unplug the power supply from the electrical outlet. Ensure the electrical outlet is located close to the apparatus and is always easily accessible.

Telephone connection : The voltage on the network is classified as TNV-3 (Telecommunication Network Voltages, as defined in the standard EN 60-950).

Safety precautions : Do not allow the handset to come into contact with water. Do not open the handset or the base station. You could be exposed to high voltages. Do not allow the charging contacts or the battery to come into contact with conductive materials.

Environmental care : Please remember to observe the local regulations regarding the disposal of your packaging materials, exhausted batteries and old phone and where possible promote their recycling.

Declaration of conformity

We,
Philips Consumer Electronics
DECT & Home Telephony
Route d'Angers
72081 Le Mans Cedex 9
France

Declare that the products Onis 380 (TU5371, TU5372 & TU5370) are in compliance with the Annex III of the R&TTE-Directive 1999/5/EC and then with the following essential requirements :

Article 3.1.a (protection of the health & the safety of the user) : EN 60950 (2000)

Article 3.1.b : (protection requirements with respect to the electromagnetic compatibility) :
ETSI EN 301 489-6 VI.I.I (09/2000) & ETSI EN 301 489-1 VI.3.1 (09/2001)

Article 3.2 (effective use of the radio spectrum) EN 301 406 (2001)

The presumption of conformity with essential requirements regarding Council directive 1999/5/EC is ensured.

Date : 08/04/03

Vice President & General Manager. DECT & Home Telephony

Telephone troubleshooting...

PROBLEMS	CAUSES	SOLUTIONS

INFORMATION ON TEXT MESSAGING (SMS) IN EIRE

You must first subscribe to your network provider's Caller Display service.
Example : call EIRCOM free 1901.

WARNING ! Change the SMS centre in your Onis 300 :
Go to **SMS** menu and select **SMS Settings** sub menu.
Select the **SMS Centre** sub menu and choose **SMS Centre 3**.
Please refer to the Onis 300 user manual page 11.
The network SMS centre numbers are automatically set in your Onis 300 :
Send SMS service number (Outgoing number) : 1740 9900
Receive SMS service number (Incoming number) : 0818 365 135
Contact your network provider for more information.

Registration to SMS service is done by sending your first SMS.

There is a charge for sending SMS text messages (Contact your network provider for more information).

REMINDER ! If there are two **SMS- enabled** phones on your telephone line, you will have to deactivate the SMS feature on one of the devices.

SMS and Caller Display subscription : The way to subscribe to and to connect to the Short Message Service (SMS) as well as the SMS function may be operator dependent, and may vary in time. Please contact your network operator for more information. The following information is believed to be exact at the time of writing. It is provided for guidance only, and does not guarantees accuracy over time.

**SMS and Caller Display disclaimer :** The Short Message Service and Caller Display features of the Onis 300 telephone terminal are network operator dependent. The terminal can provide them only if the network offers such features, and if the user has subscribed to these features. The Onis 300 has been carefully developed and tested according to the latest version of the SMS and CLI standards, and is up to date at the time of product release (March 2003). However, Philips cannot take any responsability and guarantee the interoperability with the operator network in case of standard modification, network modification and/or of incomplete or inaccurate implementation of the standard by the network.

Text messaging in the UK see overleaf $\quad$ CE $\quad$ **3111 285 20913**

INFORMATION ON TEXT MESSAGING (SMS) IN THE UK

You must first subscribe to your network provider's Caller Display service.

The SMS service is provided by Bizzyline through your network provider. Bizzyline provides the service and your network provides the infrastructure.

Registration to the SMS service is done by sending your first SMS.
Doing so, you agree with Bizzyline terms and conditions (Call 0906 3020069 (50p/min)).
Bizzyline e-mail contact : smsservice@bizzyline.net

There is a charge for sending SMS text messages (Contact Bizzyline for more information).

The current network SMS centre (Bizzyline Ltd) numbers set in your Onis 300 are:
Send SMS service number (Outgoing number) : 1470 0911 023 5029
Receive SMS service number (Incoming number): 0161 274 599
Contact Bizzyline for more information.

By default, your Onis 300 is set with the SMS centre 1 (bizzyline).
If you change this setting, the SMS service may not work.

SENDING SMS FROM A FIXED LINE TO A FIXED LINE : follow instructions in the user guide.

SENDING SMS FROM A FIXED LINE TO A MOBILE : follow instructions in the user guide.

Warning : When sending an SMS to a mobile phone, do not enter any destination box as your SMS will not be delivered.
Please note that your phone number appears at the end of the text message between two #.
If you have used 160 characters in the text your number will overwrite the last letters of the message.

SENDING SMS FROM A MOBILE PHONE TO A FIXED LINE :

1- Using the **REPLY** option on the mobile, the user has to insert at the end of the text the fixed line telephone number between two #.
Example : when replying to 0212 123456, the user must insert #0212123456# at the end of the message.

2- Using the **SEND** option : send the SMS through the dedicated server (Big Mobile) : 07786201010, which will redirect the SMS to the receiver. The user has to insert at the end of the text the fixed line telephone number between two #.
Example : When sending an SMS to telephone number 0213456789, you need to send it to the server 07786201010 and insert at the end of the text the receiver's number #0212123789#.
We advise you to inform those people wanting to send SMS from mobiles to your Onis 300 of these requirements.

USING DESTINATION BOX ON YOUR ONIS 300 :

In order to receive an SMS in a specific SMS box, you must have previously sent at least one SMS from this box.

REMINDER ! If there are two **SMS- enabled** phones on your telephone line, you will have to deactivate the SMS feature on one of the devices.

SMS and Caller Display subscription : The way to subscribe to and to connect to the Short Message Service (SMS) as well as the SMS function may be operator dependent, and may vary in time. Please contact Bizzyline for more information. The following information is believed to be exact at the time of writing. It is provided for guidance only, and does not guarantee accuracy over time.

SMS and Caller Display disclaimer : The Short Message Service and Caller Display features of the Onis 300 telephone terminal are network operator dependent.
